DETAILED ACTION

Election/Restrictions

Claims are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 0/0/08.

Drawings

The drawings are objected to under 37 CFR 1.83(a) because they fail to show details and labels as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either

Application/Control Number: 10/552,812

Art Unit: 3737

"Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

Applicant is reminded of the proper content of an abstract of the disclosure.

A patent abstract is a concise statement of the technical disclosure of the patent and should include that which is new in the art to which the invention pertains. If the patent is of a basic nature, the entire technical disclosure may be new in the art, and the abstract should be directed to the entire disclosure. If the patent is in the nature of an improvement in an old apparatus, process, product, or composition, the abstract should include the technical disclosure of the improvement. In certain patents, particularly those for compounds and compositions, wherein the process for making and/or the use thereof are not obvious, the abstract should set forth a process for making and/or use thereof. If the new technical disclosure involves modifications or alternatives, the abstract should mention by way of example the preferred modification or alternative.

The abstract should not refer to purported merits or speculative applications of the invention and should not compare the invention with the prior art.

Where applicable, the abstract should include the following:

- (1) if a machine or apparatus, its organization and operation;
- (2) if an article, its method of making;
- (3) if a chemical compound, its identity and use;
- (4) if a mixture, its ingredients;
- (5) if a process, the steps.

Extensive mechanical and design details of apparatus should not be given.

The abstract of the disclosure is objected to because the abstract does not set forth the nature and gist of the invention. Correction is required. See MPEP § 608.01(b).

Application/Control Number: 10/552,812 Page 4

Art Unit: 3737

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT.
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC.
- (f) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (I) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

Claim Objections

Claims 12-23 are objected to because of the following informalities: These claims contain language, which is unclear if not indefinite. See for instance claim 12, which recites an arrangement for carrying out the method as claimed in...

Application/Control Number: 10/552,812

Art Unit: 3737

Every claim having such unclear limitations has been read as an apparatus claim.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1 and 12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "such" in claims 1 and 12 is a relative term which renders the claim indefinite. The term "such" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. Correction is required.

Claims 13-23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The examiner of record has interpreted claim 12 as an "apparatus" claim depending on a method claim with process steps. This is improper and correction is required.

Claim 1 recites the limitation "the reflected" in the last step of the claim.

There is insufficient antecedent basis for this limitation in the claim.

Claims 1-3, 5, 7-9 and 11-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "and/or" are indefinite since they are not positively recited (this also applies to other claims);

it fails to positively set forth the active steps of the method e.g. introducing, generating, irradiating and detecting etc...;

In claims 1 and 12, the phrase "an examination area of an examination object" is not clear, it is vague as to what "area of examination" refers to;

In claims 1 and 12, it is unclear how a magnetic field is generated with two different strengths, and therefore, it is also unclear how the spatial location of both sub-areas is changed. Thus, the scope of the claim is unclear.

A prior art rejection has been applied to be pertinent, even though the examined claims do not clearly set forth the metes and bounds of the patent protection desired and are vague and indefinite. However, any subsequently presented claims, in definite form will be subject to the applied art rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3737

Claims 1-5, 11-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Kraus et al. (6,470,220).

Regarding claims 1-3 and 11, Kraus, Jr. discloses an apparatus and method for heating magnetic particles in a target region by generating a magnetic field having a first low magnetic strength region and a second high magnetic strength region which is formed and changing the position in space of the subregions for so long and with such a frequency that the target region is heated, along with means for the acquisition and analysis of signals depending on the magnetization of the region of action [col. 13, lines 9-62; co. 14, lines 9-15 and see claim 1]. Kraus, Jr. further discloses that the signals induced in the region of action are received with the help of a coil arrangement [col. 13, lines 16-18; col. 9, lines 9-32] and delivering of an agent to a magnetic nano-or micro-particles to the tumor site [col. 3, lines 53-col. 4 line 5]. Kraus disclose the use of a contrast agent in which the total quantity of injected Tc99m is limited by the allowable radiation dose a subject may receive during the scintigraphy procedure.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/552,812

Art Unit: 3737

Claims 6-10 and 19-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hauger et al. (DE 199 30 408 A1) or Fercher et al. (DE 19624167 A1).

Kraus et al. discloses all the subject matter as set forth above in claims 1 and 12, but it appears not to disclose an optical contrast agent, in particular a fluorescent contrast agent, is introduced into or present in the examination area, detecting the scattered and/or reflected electromagnetic radiation and evaluating in a direction-dependent manner; detecting the change in intensity of the scattered and/or reflected electromagnetic radiation as a function of the oscillation mode or the rate of rotation; using electromagnetic radiation of at least one specific wavelength and/or wavelength spectrum, the radiation source is an optical fiber or a number of optical fibers, in particular integrated in a catheter or an endoscope. However, in the same field of endeavor, Hauger et al. teach the use of an OCT system comprising a scanner, an evaluation unit and display unit using an OCT beam in the infrared region to measure sectional images of biological samples (see Figures 1, 3 and 4 and related description, see abstract, col. 4, line 5 – col. 5 line 65). Moreover, Fercher et al. teach the use of an OCT system to measure light beam of a coherence interferometer of biological samples (see Figure 6 and related description, see abstract). It would have been obvious for one of ordinary skill in the art at the time of the invention to modify the system and method disclosed by Kraus et al. with the teachings of Hauger et al. or Fercher et al. to enhance the capabilities of the system and method, resulting in a safer and more efficient medical procedure.

Art Unit: 3737

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

Claims 1-23 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-14 of US Patent No. 7,300,452.

Although the conflicting claims are not identical, they are not patentably distinct from each other because the subject matter claimed in the instant

application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter.

This is a <u>provisional</u> obviousness-type double patenting rejection.

Claims 1-23 are provisionally rejected on the ground of nonstatutory double patenting over claims 1-8 and 11-17 of copending Application No. 10/270991. This is a provisional double patenting rejection since the conflicting claims have not yet been patented.

The subject matter claimed in the instant application is fully disclosed in the referenced copending application and would be covered by any patent granted on that copending application since the referenced copending application and the instant application are claiming common subject matter.

Furthermore, there is no apparent reason why applicant would be prevented from presenting claims corresponding to those of the instant application in the other copending application. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JOHN F. RAMIREZ whose telephone number is (571)272-8685. The examiner can normally be reached on (Mon-Fri) 7:00 - 3:30 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian L. Casler can be reached on (571) 272-4956. The
